Subject: Superfund Clean Up

I want the EPA to choose Alternative G. This is the only responsible option. Over the decades industry has polluted the river and the land with toxic chemicals.

They need to be held accountable and made to pay all of the costs to recover the 11 miles of the Super fund area. They should not be allowed to pass on their costs to the rate payers or the taxpayers.

Monitoring of the area for air and soil quality should start now and continue past the clean up timeline.

The river was used by the industries as their dumping ground and to save money. The people are left with a contaminated river and river bank that should be theirs to play, fish and live on.

Thank you for your consideration,
